Glossary of Terms

Term	Definition
American Sign Language (ASL)	A sign language that is used for communication by and with deaf people
ASL/English bilingualism	The development and use of both ASL and English in deaf and hard of hearing individuals, particularly children, within education and home settings
Assistive Technology	Any device, equipment, or system that helps individuals with disabilities increase, maintain, or improve their functional capabilities
Audiologist	A healthcare professional who identifies, assesses, and manages disorders of hearing, balance, and other neural systems
Audiology	The study of hearing, balance, and related disorders
Augmentative and Alternative Communication (AAC) Devices	Tools that help individuals with speech and language impairments communicate more effectively
Bone-Anchored Devices (BAHA or BAI)	A type of hearing device that transmits sound vibrations directly to the inner ear through the skull, bypassing the middle ear
Captioning Assistance	Written text displayed on a screen that shows what is being said in real time or recorded media.
Care Coordination	Organization of patient care activities and sharing information among all of the participants concerned with a patient's care to achieve safer and more effective care
Cochlear Implant (CI)	An electronic medical device that can help to provide a sense of sound to a person who is deaf or has severe hearing loss

D/deaf Culture	The shared values, beliefs, and social norms, artistic expressions, and historical experiences of a community of individuals who are deaf and use sign language as their primary means of communication
DeafBlind	A combination of both vision and hearing loss
Deaf and Hard of Hearing (DHH)	Individuals with any degree of hearing or type of hearing loss, from mild to profound
Diagnostic Testing	A detailed medical assessment used to identify the presence, type, or extent of a disease or condition in a patient or examine how a child is developing in specific areas, such as speech, language, or hearing.
Early Hearing Detection and Intervention (EHDI)	Federal program that tracks the screening and diagnosis of infants for hearing loss and refers them for appropriate services
Early Intervention	A system of services and supports designed to help infants and toddlers who have developmental delays or disabilities
Hearing Aid	A medical device that makes sounds louder and easier to understand, especially speech
Hearing Scientists	Professionals who investigate the science of hearing and balance, including the biological, physical, and psychological processes involved in sound perception
Individualized Educational Plans (IEP)	A legally binding document that outlines a customized educational program for students with disabilities

Interpreter	Facilitates communication between individuals who use ASL and those who primarily use spoken English
Listening and Spoken Language (LSL)	An approach that helps individuals with hearing loss develop speech and listening skills through the use of hearing technology like hearing aids and cochlear implants
Parent Guide	A parent or family member of a DHH child who provides resources and assistance to other families with DHH children, especially those who are newly diagnosed
Remote Mic Systems (FM System)	A wireless technology designed to help individuals with hearing loss understand speech more clearly, especially in noisy environments or at a distance
Speech Language Pathology	A field focused on the assessment and treatment of communication and swallowing disorders
Speech Language Therapist	A medical professional who diagnoses and treats communication and swallowing disorders
Visual Language	A system of communication that utilizes visual elements to convey meaning and information
